Introduction

A radically new UI layout paired with goodies like a Darkmode will give your Drupal's Admin interface a facelift. The Gin theme also includes things which are currently out of scope for Claro and/or some customisations we're experimenting with for the future. Built on the foundation of Claro from one of the lead designers of Claro & Drupal Design System.

Gin can be used in a headless environment, as it provides a nice [login screen] (https://drupal.org/project/gin_login) which is missing in the default Drupal admin themes.

- For a full description of the module, visit the [project page] (<https://www.drupal.org/project/gin>).
- Use the [Issue queue] (<https://www.drupal.org/project/issues/gin>) to submit bug reports and feature suggestions, or track changes.
- Documentation can be found [here] (<https://www.drupal.org/docs/contributed-themes/gin-admin-theme>).

Requirements

This theme requires Drupal core ≥ 9.0 .

****Note**:** For all functions to work properly, it is recommended that you also install [Gin Toolbar] (https://drupal.org/project/gin_toolbar).

Installation

Install as you would normally install a contributed Drupal theme. See [Gin documentation] (<https://www.drupal.org/drupalorg/docs/content/gin-admin-theme/installation-and-configuration>) or visit <https://www.drupal.org/node/1897420> for further information.

Set Gin as default admin theme

- Navigate to Admin > Appearance
- On the same page, click "Install" under Gin
- At the bottom of the page, switch the Administration theme to Gin

Troubleshooting

- Setup Gin locally that you can compile CSS & JS files.
`nvm use && npm i`
- Run dev env with watcher and debug output (development process)
`npm run dev`

```
- Compile assets (for dev branch)\n`npm run build`
```
